Figure 1 displays the protein structure and disorder analysis for the human protein (UniProt ID: P04621). The protein is 180 amino acids long. The analysis is presented in four panels, each showing a different view of the protein structure and disorder analysis.

The panels are:

- Sequence:** The amino acid sequence is shown, with residues 1-60, 61-120, 121-180, and 181-240 highlighted in different colors.
- Secondary structure:** The secondary structure is shown as a ribbon diagram, with residues 1-60, 61-120, 121-180, and 181-240 highlighted in different colors.
- SS confidence:** The confidence of the secondary structure is shown as a bar chart, with residues 1-60, 61-120, 121-180, and 181-240 highlighted in different colors.
- Disorder confidence:** The confidence of the disorder is shown as a bar chart, with residues 1-60, 61-120, 121-180, and 181-240 highlighted in different colors.

The protein is annotated with UniProt ID P04621 and is known to be involved in the regulation of the cell cycle.
